

Mouse Actions

03 August 2024 10:33

Actions - pre defined class provided in selenium for performing Mouse Actions.

1. Mouse Hover - `moveToElement(element)`
<https://demo.nopcommerce.com/>
2. Right Click - `contextClick(element)`
<http://swisnl.github.io/jQuery-contextMenu/demo.html>
3. Double Click - `doubleClick(element)`
https://www.w3schools.com/tags/tryit.asp?filename=tryhtml5_ev_ondblclick3
4. Drag and Drop - `dragAndDrop(source,target)`
<http://www.dhtmlgoodies.com/scripts/drag-drop-custom/demo-drag-drop-3.html>

```
<input id="xyz">Welcome</input>
getText() --> returns the inner text -->welcome
getAttribute("id") --> returns the value of attribute --->xyz
```

```
<input value="Welcome"></input>
getAttribute("value") --> Welcome
```

```
getText() --->returns inner text of web element
getAttribute("value") ---->returns the value of attribute
```

`Build()` - creates an action

`Perform()` - It is capable of creating Action and complete action

Internally perform method can call build method and creates action and completes actions.

In some scenarios initially we create action and in later statements we will complete action.

Action VS Actions

Actions -- class, will be used to store created actions.

Action -- interface, will be used to store created actions.

Assignments

1)double Click & Drag and drop

<https://testautomationpractice.blogspot.com/>

2)drag and drop

http://demo.guru99.com/test/drag_drop.html
